

The Nuts and Bolts of Rods and Screws
Intraoperative Monitoring Guide For Spine Surgeries
Robin H. Vaughan, PhD., D.ABNM, CNIM

The intent of this handbook is for the monitorist to be able to utilize the information for each surgical procedure in their pre-operative planning and then intraoperative monitoring. The sections give specifics on what neural structure is at risk and when during the surgery, the modalities that can assess the function of those neural structures, what supplies will be required, what position the patient will be in etc. For each surgery there are two levels of monitoring, standard and advanced. A literature review and bibliography are included. They are in no way exhaustive but do represent an excellent sampling of the scientific data that supports the modalities advocated in "Nuts and Bolts."

Also included is a Quick Pick, Color-Coded guide for each surgical procedure.

New surgical procedure updates will be made available to add to the handbook.

Please fill out the order form below. All fields are required for processing.
Cost is \$225.00 per book (includes tax, shipping and handling)
